Contents

Chapter 1 – Introduction		
Article No.	Article	Page No.
1.1	The Importance of Automation and Centralized Control Onboard Ships	1
1.1.1	Future Aspects	5
1.2	New Developments in Main Engine Control Systems	5
1.2.1	Electronic Control System Unit	7
1.2.2	Engine Condition Monitoring System	7
1.2.3	Operating Mode Control Program Control Unit	8
1.3	Factors for Development of Automatic Control	9
1.3.1	Safety	9
1.3.2	Downsized Manpower	9
1.3.3	The Human Element	9
1.3.4	Cost of Fuel and Operation Efficiency	10
1.3.5	Fail Safe Policies	10
1.3.5.1	Failure Analysis	11
1.3.6	Redundancy	11
1.4	Rules and Regulations	11
1.5	Interpretation of the Mandatory Requirements for UMS Ships	12
1.5.1	Control of Propulsion Equipment from the Bridge	12
1.5.2	Centralized Control	12
1.5.3	Automatic Fire Detection and Alarm System	12
1.5.4	Comprehensive Machinery Alarm System	13
1.5.5	A Fire Control Station	13
1.5.6	Automatic High Bilge Level Alarms and Pumping Systems	13
1.5.7	Automatically Started Emergency Generator for Essential Services	13
1.5.8	Local (Manual) Control of Essential Services	13
1.5.9	Automatic Control System for the Boiler	14
1.5.10	Safety Systems	14
1.5.11	Regular Testing and Maintenance of Instrumentation / Monitoring Systems	15
1.6	Control Media	16
1.6.1	Advantages of a Pneumatic System on a Ship	16
1.6.2	Advantages of an Electronic System on a Ship	16
1.7	Relevant SOLAS Regulations	17
1.8	Summary of SOLAS Regulations Related to Marine Control Engineering	17

Contents

Chapter 1 – Introduction (Continued)		
Article No.	Article	Page No.
1.8.1	Main Machinery Control	18
1.8.2	Automatic Shutdown	18
1.8.3	Special Requirements for Boilers	19
1.8.4	Alarm Systems	19
1.8.5	Water Level Detection in Bulk Carriers	20

Chapter 2 – Process Control Theory		
Article No.	Article	Page No.
2.1	Process Control System	21
2.1.1	Open Loop System	22
2.1.2	Closed Loop System	23
2.1.2.1	Example of a Closed Loop Control System Onboard a Ship	25
2.2	Automatic Control System	27
2.2.1	Functions of Automatic Control	28
2.2.2	Feedback in a Control System	28
2.2.2.1	Negative Feedback	29
2.2.3	Terminology	29
2.3	Process Time Lags	32
2.3.1	Dead Time	32
2.3.2	Time Constant	32
2.3.3	Resistance	33
2.3.4	Transportation Time	33
2.4	Stability of Automatic Control Systems	34
2.5	Dynamic Response of a System	36
2.5.1	Step Response	38
2.5.2	Static Behaviour	38
2.6	Types of Control Systems	39
2.6.1	Feedforward Control	39
2.6.2	Feedforward Plus Feedback Control	40
2.6.3	Cascade Control	40
2.6.4	Ratio Control	41
2.6.5	Digital Control	42
2.6.6	Fuzzy Control	44
2.6.7	Selective Control	44

Contents

Chapter 2 – Process Control Theory (Continued)		
Article No.	Article	Page No.
2.7	Graphical Symbols in Piping and Instrumentation Diagrams (P and ID)	45
2.7.1	Identification Letters	45
2.7.2	Functional Symbols	48
2.7.3	Primary Elements	54
	Find the Answers	55

Chapter 3 – Sensing Elements and Transducers		
Article No.	Article	Page No.
3.1	Introduction	57
3.1.1	Sensor and Transmitter	58
3.1.2	Differences between Transducers and Transmitters	59
3.1.2.1	Transducers	59
3.1.2.2	Transmitters	59
3.1.2.3	The 4-20 mA Current Loop	60
3.1.3	Voltage-to-Current Converter	62
3.1.4	Reduction of Noise Interference in Sensor Line Cables	64
3.1.5	Signal Type	65
3.1.6	Transmission System Dynamics	65
3.1.7	Electronic Transmitter Adjusted Range	66
3.1.8	Pneumatic Transmitter Adjusted Range	67
3.2	Important Terms	68
3.2.1	Transducer	68
3.2.2	Accuracy	68
3.2.3	Reproducibility	68
3.2.4	Precision	68
3.2.5	Linearity	68
3.2.6	Sensitivity	68
3.2.7	Span	68
3.2.8	Range	68
3.2.9	Dead Band	68
3.2.10	Dead Time	69
3.2.11	Drift	69
3.2.12	Offset	69
3.2.13	Response Time	69
3.2.14	Hysteresis	69
3.2.15	Resolution	69

Contents

Chapter 3 – Sensing Elements and Transducers (Continued)		
Article No.	Article	Page No.
3.2.16	Repeatability	70
3.2.17	Telemetry	70
3.3	Switches and Transducers	70
3.3.1	Switches	71
3.3.2	Working of a Pressure Switch	72
3.3.3	Sensor Classification	73
3.4	Temperature Measurement	74
3.4.1	Mechanical Temperature Measuring Devices	75
3.4.1.1	Principle of Operation	75
3.4.1.2	Liquid-in-glass Thermometer	75
3.4.1.3	Bimetallic Strip Thermometer	75
3.4.2	Resistance Temperature Detectors (RTDs)	76
3.4.3	Platinum Resistance Temperature Detector Pt 100	77
3.4.3.1	RTD Construction	79
3.4.3.2	Temperature Detection Circuitry	80
3.4.3.3	Three-wire Measurement	82
3.4.3.3.1	Connection of the Transmitter with the RTD	83
3.4.3.4	Four-wire measurement	84
3.4.4	Thermistors	85
3.4.4.1	Applications of Thermistors	87
3.4.5	Thermocouples	88
3.4.5.1	Principle of Operation	88
3.4.5.2	Cold Junction Compensation	93
3.4.6	Thermopile	94
3.4.7	P-N Junctions	95
3.4.8	Characteristics of Various Types of Temperature Sensors	96
3.4.9	Infrared Temperature Sensors	97
3.5	Pressure Measurement	99
3.5.1	U-tube Manometers	100
3.5.2	Conversion from Mechanical Input to Electrical Output	102
3.5.3	Diaphragms and Bourdon Tubes	103
3.5.4	Strain Gauges	106
3.5.4.1	Bonded Resistance Gauges	107
3.5.4.2	Unbonded Strain Gauges	109
3.5.4.3	Pressure Transducer with a Diaphragm	110

Contents

Chapter 3 – Sensing Elements and Transducers (Continued)		
Article No.	Article	Page No.
3.5.4.4	Use of a 'Wheatstone Bridge' Circuit to Monitor the Change in Resistance	111
3.5.4.5	Theory of the Wheatstone Bridge	111
3.5.4.6	Fixed Gain Amplification	111
3.5.4.7	Advantages of a Wheatstone Bridge	112
3.5.5	Piezoelectric Transducers	113
3.5.6	Inductive and Reluctive Pressure Sensors	116
3.5.7	Linear Variable Differential Transformers	118
3.5.8	Capacitive Pressure Sensors	120
3.5.9	Variable Capacitance Transducer	122
3.5.10	Optical Pressure Transducers	124
3.6	Level Measurement	124
3.6.1	Electrical Methods	125
3.6.2	Hydrostatic Pressure Methods	125
3.6.3	Dip Tube Methods	125
3.6.4	Resistance Tape Level Measurement	127
3.6.5	Conductivity Probe Method	127
3.6.6	Gauge Glass	128
3.6.7	Hydrostatic Head Level Sensors	130
3.6.8	Differential Pressure Transmitters for Boiler Water Level Measurement	131
3.6.8.1	Level Compensation	133
3.6.8.1.1	Zero Suppression	133
3.6.8.1.2	Zero Elevation	134
3.6.8.2	Three Valve Manifold	137
3.6.9	Capacitance Level Sensor	139
3.6.9.1	Level Measurement of Electrically Conductive Materials	141
3.6.9.2	Measurement of Electrically Non-conductive Materials	142
3.6.9.2.1	Proximity (Non-contacting) Measurements	142
3.6.10	Ultrasonic Liquid Level Sensor	145
3.6.10.1	Working Principle of an Ultrasonic Sensor	146
3.6.11	Tank Radar System	147
3.6.11.1	The Radar Level Measurement Principle	148
3.6.11.2	Frequency Modulated Continuous Wave (FM - CW) Radar	149
3.6.11.3	Pulse Radar Level Transmitters	151
3.7	Flow Measurement	153
3.7.1	Rotameter	154
3.7.2	Orifice Flow Meter	155

Contents

Chapter 3 – Sensing Elements and Transducers (Continued)		
Article No.	Article	Page No.
3.7.2.1	Types of Orifice Plates	157
3.7.3	Venturi Flow Meter	159
3.7.4	Flow Nozzle	160
3.7.4.1	Operation of the Flow Nozzle	160
3.7.5	The Pitot Tube	161
3.7.5.1	The Averaging Pitot Tube	162
3.7.6	Pressure / Temperature Correction in Flow Measurement	163
3.7.7	Turbine Flow Meter (Mechanical)	164
3.7.8	Turbine Flow Meter (Electrical)	164
3.7.9	Electromagnetic Flow Meter	165
3.7.10	Ultrasonic Flow Meter	167
3.7.11	Doppler Flow Meter	168
3.7.11.1	Theory of Doppler Effect Ultrasonic Flow Meter	169
3.7.11.2	Transit-Time Flow Meters	170
3.7.11.3	Theory of the Time of Flight Ultrasonic Flow Meter	171
3.8	Smart Transmitters	174
3.8.1	Smart Transmitter Operation	176
3.8.2	Automatic Self-Calibration	178
3.8.3	Failsafe Mode	178
	Find the Answers	179

Chapter 4 – Miscellaneous Monitors		
Article No.	Article	Page No.
4.1	Introduction	183
4.2	Viscosity and its Measurement	184
4.2.1	Kinematic Viscosity	184
4.2.2	Newtonian Fluid	184
4.3	Viscosity Sensor (Viscometer)	184
4.3.1	Viscotherm	186
4.3.2	Electromagnetic Viscometer	188
4.3.3	Fork-type Viscometer	190
4.3.3.1	Principle of Operation	190
4.3.4	Torsion Pendulum-type Viscometer	191
4.4	Torque and its Measurement	193
4.4.1	Principle of Measurement	193

Contents

Chapter 4 – Miscellaneous Monitors (Continued)		
Article No.	Article	Page No.
4.4.2	Proximity Torque Sensor	194
4.4.3	Power Calculation	194
4.4.4	Magnetic Stress Sensitivity	195
4.4.5	Principle of Measurement	197
4.4.6	Torsion Detector Ring	198
4.5	The Combustible Gas Indicator (CGI) or Explosimeter	201
4.5.1	Application	201
4.5.2	Principle of Operation	201
4.6	The Tankscope	203
4.6.1	Principle of Operation	204
4.7	Things to Remember	205
4.7.1	Presence of Gas	205
4.7.2	Pressure in Tanks	205
4.7.3	Danger of Further Gas Release after Declaring a Space “Gas Free”	205
4.7.4	Presence of Gas in other Spaces	205
4.8	Fixed Oxygen Analyser	206
4.8.1	Paramagnetic - Oxygen Analysis	206
4.8.2	Principle of Operation	206
4.8.3	Construction	206
4.9	Beckman Oxygen Analyser (Munday Cell Type)	208
4.9.1	Principle of Operation	208
4.10	Zirconia Oxygen Analysis	210
4.11	Fire Alarm and Detection System	211
4.12	Heat Detectors	212
4.12.1	Rate of Rise Type	212
4.13	Combustion Detector	213
4.13.1	Operation of Smoke Detectors	213
4.14	Detectors Reacting to Radiation Emanating from Flames	215
4.15	Crankcase Oil Mist Detector	216
4.15.1	Crankcase Explosions	216
4.15.2	Construction and Operating Principle of a Basic Detector	217
4.15.3	The Comparison-type Crankcase Oil Mist Detector	218
4.15.4	The Line of Sight Oil Mist Detector	220
4.15.5	Principle of Operation	221
4.16	Vibration Monitoring	222

Contents

Chapter 4 – Miscellaneous Monitors (Continued)		
Article No.	Article No.	Page No.
4.16.1	Causes of Vibration	223
4.16.2	Eddy Current Displacement Transducer	224
4.16.3	Piezo-electric Accelerometers	225
4.16.4	Magnetic Velocity Vibration Transducer	227
4.16.5	Laser Displacement Vibration Sensor	227
4.16.6	Laser Doppler Vibrometers - Velocity Sensors	228
4.16.6.1	Principle of Operation	228
4.16.7	Reference-beam Vibrometers	230
4.17	Proximity Sensors	230
4.17.1	Capacitive Proximity Sensors	233
4.18	Incremental Position Encoder	235
4.19	Synchros	238
4.19.1	Synchros for Rudder Angle and Course Indication	239
	Find the Answers	241

Chapter 5 – Automatic Control System Fundamentals		
Article No.	Article	Page No.
5.1	Introduction	243
5.2	Modes of Control	243
5.2.1	Discrete Controllers	243
5.2.1.1	Applications of On-Off Control	244
5.2.1.2	Advantages of On-Off Control	245
5.2.1.3	Major Disadvantage of On-Off Control	245
5.2.2	Continuous Control	245
5.3	Control Related Terminology	247
5.3.1	Rise Time	247
5.3.2	Peak Time	247
5.3.3	Settling Time	247
5.3.4	Steady-state Error	247
5.3.5	Peak Related Criteria	248
5.3.6	Time Constant	248
5.3.7	Dead Band	249
5.3.8	Hunting	250
5.4	Sources of Load Changes	250
5.5	Selecting Controller Action	251

Contents

Chapter 5 – Automatic Control System Fundamentals (Continued)		
Article No.	Article	Page No.
5.5.1	Direct-acting Element	252
5.5.2	Reverse-acting Element	252
5.5.3	Hysteresis	252
5.5.4	Stability	253
5.6	System Response	255
5.6.1	Distance Velocity Lag	255
5.6.2	Measurement Lag	255
5.6.3	Transfer Lag	255
5.7	Proportional Control	256
5.7.1	Controller Sensitivity or 'Gain'	259
5.7.2	Limits of Proportional Action	263
5.8	Integral Control	263
5.9	Rate or Derivative Control	269
5.10	P + I + D Control	272
5.11	PID Control Strategy	275
5.11.1	Desired Response to a Step Change	275
	Find the Answers	276

Chapter 6 – Pneumatic Controllers		
Article No.	Article	Page No.
6.1	Introduction	279
6.2	Working Principle of the Nozzle Flapper	281
6.3	Nozzle-flapper with Negative Feedback	283
6.4	Moment-balance Mechanism	287
6.5	Motion-balance Mechanism	288
6.5.1	Principle of Operation	288
6.6	Fundamentals of a Motion-balance Controller Mechanism	290
6.7	Angular Motion-balance Mechanism	291
6.8	True Force Balance (Stack) Mechanism	292
6.9	Air Relay (Pneumatic Amplifier)	293
6.10	Continuous Bleed-type Pneumatic Relay	294
6.11	Non-bleed-type Pneumatic Relay	295
6.11.1	The Second Stage Amplifier or "Booster Relay"	296
6.12	Pneumatic Transmitter	300
6.12.1	Pneumatic Pressure Transmitter	300

Contents

Chapter 6 – Pneumatic Controllers (Continued)		
Article No.	Article	Page No.
6.12.1.1	Principle of Operation	300
6.12.2	Motion-balance Device	301
6.12.3	Force-balance Temperature Transmitter	302
6.12.4	Electronic Force-balance Transmitter	303
6.12.5	Differential Pressure Transmitter	305
6.13	Square Root Extractor	306
6.14	Electro-Pneumatic (I/P) Converter	308
6.14.1	Force-balance Type of I/P Converter	309
6.14.2	Stack-type I/P Converter	311
6.15	Pneumatic Controller	311
6.15.1	Pneumatic Proportional Controller	312
6.15.2	Automatic Pneumatic Controller	314
6.16	Pneumatic Proportional + Integral Control System (Reset Action)	316
6.16.1	Example of Proportional and Integral Control	318
6.16.2	Pneumatic Liquid Level P and I Controller	319
6.17	Pneumatic PID Controller	321
6.17.1	Adjustment for Operations	325
6.17.2	Tuning the Controller	325
6.17.3	Maintenance of the Controller	326
6.18	Stacked Type Controller	326
6.18.1	Desired Value	327
6.18.2	Proportional Control	327
6.18.3	Integral Control	329
6.18.4	Derivative Control	331
6.19	Process Control Systems Onboard Ships	331
6.19.1	Feedforward - Feedback Control	331
6.19.2	Split Range Control	332
6.19.3	Cascade Control	333
6.19.4	Jacket Cooling Water (Cascade Control of Temperature)	334
6.19.5	Piston Cooling Water Temperature Control System	336
6.19.6	Lubricating Oil Temperature Control	337
6.19.7	Boiler Water Level Control	338
6.19.8	Steam Temperature Control	340
6.19.9	Deaerator Level Control	342
6.20	PID Controller Tuning	343

Contents

Chapter 6 – Pneumatic Controllers (Continued)		
Article No.	Article	Page No.
6.20.1	Ultimate Sensitivity Method (Ziegler and Nichols Method)	347
6.20.2	Quarter Decay Response Method (Optimum Decay Ratio)	348
6.20.3	Trial and Error PID Tuning Procedure	349
6.21	Fault Finding in Control Systems	350
	Find the Answers	350

Chapter 7 – Electronic Analog and Digital Controllers		
Article No.	Article	Page No.
7.1	Introduction	353
7.2	The Operational Amplifier	354
7.2.1	Circuit Description	356
7.3	Digital Control	361
7.3.1	Auto Tune PID Control	366
7.4	The Electronic Governor	366
7.4.1	The Magnetic Speed Pickup (MPU)	367
7.4.2	Representation of the EFC Cycle	369
7.4.3	The Electronic Governor Controller	369
7.5	Distributed Control Systems (DCS)	370
7.6	Highway Addressable Remote Transducer (HART)	374
7.6.1	Application of the HART protocol	377
7.6.2	HART Multidrop Mode	380
7.6.3	The HART Server	380
7.6.4	WirelessHART	382
7.7	Digital Data Communication Theory	384
7.8	Fieldbus	384
7.8.1	Foundation Fieldbus	386
7.9	Process Control and Automation using Modbus Protocol	390
7.10	Fuzzy Logic Controller	393
7.10.1	Fuzzy Set Theory	394
7.10.2	Defuzzification	396
7.11	Supervisory Control and Data Acquisition (SCADA) Systems	402
7.11.1	Supervisory Control and Data Acquisition Software	402
7.11.2	The System Concept of SCADA	403
7.11.3	RTU (Remote Terminal Unit)	404

Chapter 10 – Calibration of Sensors		
Article No.	Article	Page No.
10.1	Calibration	493
10.2	The Importance of Calibration	493
10.3	Important Terms used in Calibration	494
10.3.1	Accuracy	494
10.3.2	Precision	494
10.3.3	Resolution	494
10.3.4	Dead Zone	494

Contents

Chapter 10 – Calibration of Sensors (Continued)		
Article No.	Article	Page No.
10.3.5	Re-ranging	495
10.3.6	Bias / Offset Error	495
10.4	Calibration Under Controlled Conditions	495
10.5	Calibration Errors	497
10.5.1	Zero and Span Errors	498
10.6	Zero and Span Adjustments	500
10.7	Calibration Procedure for an Analog Linear Instrument	501
10.7.1	Up-tests and Down-tests	502
10.7.2	Step-wise Calibration	502
10.8	Calibration of an RTD	503
10.8.1	The Calibration Procedure	504
10.9	Calibration of a Thermocouple	505
10.9.1	The Loop Calibrator	506
10.10	Calibration of Pressure Transmitters	506
10.10.1	Calibration Procedure	508
10.10.2	Calibration of a Differential Pressure Transmitter	508
10.11	Calibration of an I/P Converter	509
10.11.1	Calibration Procedure	509
10.12	Calibration of a Smart Transmitter	510
10.12.1	Connecting a HART device in Parallel with a Loop	513
10.12.2	Re-ranging the Transmitter (Changing the LRV and URV)	514
10.12.3	Important Formula for Calibration Data Conversion	515
